DNA encoding new animal protein SAPAP 2 - useful for diagnosis and treatment of nervous system diseases
Claim 1: Page 7-9: 11pp: Japanese.
Claim 1: Page 7-9: 11pp: Japanese.
The present sequence represents the SAPAP2 protein. Also described in the present invention is: (A) an animal protein having an amino acid sequence substantially the same as SAPAP2; (B) a CDNA sequence encoding the amino acid sequence of SAPAP2 or (C) an amino acid sequence by the above CDNA or its partial sequence. SAPAP2 is a new animal protein which combines specifically with PSD-95/SAP90 and its related protein and is useful for the diagnosis, prevention and treatment of various nervous diseases caused by functional or structural interference SAPAP2 protein.

Antibody against alpha-chain of human interleukin 5 receptor --
useful for diagnosis and treatment of respiratory allergic diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                            e.g. chronic bronchitis
Claim 8; Page 165; 238pp; Japanese.
The present sequence is complementarity determining region 2 (CDR2)
from the light chain variable region of the murine anti-human
interleukin 5 receptor alpha chain (hIL-5R alpha) monoclonal
antibody (MAD) KM1259; KM1259 is produced by the hybridoma
FERM BP-5134, which was prepared by immunising Balb/c mice with
hIL-5R alpha, fusing spleen cells obtained from the mice with mouse
myeloma P3-01 cells and screening the resultant hybridomas. The MAD
can be used to detect or assay for hIL-5R alpha and cells
expressing it on their surface, especially to diagnose allergic
respiratory diseases, e.g. chronic bronchitis. It can also be used
                                                19-DEC-1997 (first entry)

DNA construct for expressing melanin synthesis gene in plant ovule cells - contains promoter from the tomato p2130 gene, also binary vector and transgenic plants, esp. cotton, contg. construct

Example 3; Fig 1A-B; 25pp; English.

The tomato p2130 clone contains a 564 bp insert of cDNA (131823) detected only in a tomato cDNA library prepd. from pre-arthesis stage created for a protein (R87559) of unknown function. The clone was isolated from a library prepd. from cDNA of pre-anthesis stage ovaries. The p2130 transcriptional infitation region is considered to be ovary specific and can be utilised in DNA constructs for the expression of heterologous genes, partic. in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score 34; DB 24; Length 7; Pred.                                                                                                                                                                                                                                                                                                                                 New protein SAPAPI - used for, e.g. diagnosis and prevention of various neuronal diseases

Claim 1 Page 4-7: 12pp; Japanese.

Claim 1 Page 4-7: 12pp; Japanese.

The present sequence represents the SAPAPI protein having a 992 amino acid (aa) sequence. Also described in the present invention are: (1) an animal protein having an aa sequence substantially homologous to SAPAPI. or an as sequence substantially homologous to SAPAPI, or an as sequence hybridised to the CDNA sequence. SAPAPI is a novel animal protein specific for PSD-95/SAP90 and its related protein, and may be useful for the diagnosis, prevention and treatment of various neuronal diseases caused
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The human zona pellucida-2 (HZP-2) protein may be used as a vaccine artigen. It can be artificially synthesised using recombinant techniques. Partial sequences of the HZP-2 gene were subcloned, the sequences and primers used in cloning and subcloning are given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Antibody against alpha-chain of human interleukin 5 receptor -
useful for diagnosis and treatment of respiratory allergic diseases,
e.g. chronic bronchitis

Example 2; Pages 157-158; 238pp; Japanese.
Che present sequence is the humanised light chain variable
region of the murine anti-human interleukin 5 receptor alpha chain
Chil-58 alpha monoclonal antibody (MAb) KM1259. KM1259 is produced
by the hybridoma FERM BP-5134, which was prepared by immunising
Balb/c mice with hiL-5R alpha, fusing spleen cells obtained from
the mice*with mouse myeloma P3-U1 cells and screening the resultant
thybridomas. The MAb can be used to detect or assay for hiL-5R alpha
and cells expressing it on their surface, especially to diagnose
allergic respiratory diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 2: Pages 160-161; 238pp; Japanese.
The present sequence is the humanised light chain variable region of the murine anti-human interleukin 5 receptor alpha chain (hll.5R alpha) monoclonal antibody (MAD) KM1259. KM1259 is produced by the hybridoma FERM BP-5134, which was prepared by immunising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               19-DEC-1997 (first entry)
Humanised light chain variable region of KM1259 antibody.

Humanised light chain variable region of KM1259 antibody.
Homplementarity determining region; CDR; light chain; treatment; variable region; murine; mouse; human; interleukin 5; IL-5; receptor, alpha chain; monoclonal antibody; hybridoma; detection; assay; diagnosis; allergic respiratory disease; humanised; chronic bronchitis; chimeric.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA construct capable of directing ovary-tissue transcription in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              plants - useful for modifying colour phenotype, in e.g. cotton Example 1; Fig 1; 75pp; English.

Novel polypeptides (W08364 and W08385) are respectively encoded by tomato p2130 (T48813) and p270 (T48814) ovary-specific genes. Their native function is unknown. The promoter regions of the genes can be used to direct ovary-specific transcription of a gene of interest in transgenic plants.
                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               44..54

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the light chain variable region of the murine anti-human interleukin 5 receptor alpha chain (hIL-5R alpha) monoclonal antibody (MAD) KM1259. KM1259 is produced by the hybridoma FERM BP-5134, which was prepared by immunising Balb/c mice with hIL-5R alpha, fusing spleen cells obtained from the mice with mouse myeloma P3-01 cells and screening the resultant hybridomas. The MAD can be used to detect or assay for hIL-5R alpha and cells expressing it on their surface, especially to diagnose allergic respiratory diseases, e.g. chronic bronchitis. It can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antibody against alpha-chain of human interleukin 5 receptor - useful for diagnosis and treatment of respiratory allergic diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                      Example 2; Page 141; 238pp; Japanese.

The present sequence is the humanisad light chain variable region of the murine anti-human interleukin 5 receptor alpha chain (hIL-5R alpha) monoclonal antibody (MAD) KM1259. KM1259 is produced by the hybridoma FERN BP-5134, which was prepared by immunising the mice with hIL-5R alpha, fusing spleen cells obtained from the mice with hIL-5R alpha, fusing spleen cells obtained from the mice with mouse myebloma P3-U1 cells and screening the resultant hybridomas. The MAD can be used to detect or assay for hIL-5R alpha and cells expressing it on their surface, especially to diagnose allergic respiratory diseases, e.g. chronic bronchitis. It can also
                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New ovary tissue transcriptional factors - modify transcription in tomato plant ovaries for use as mol. probes bisclosure; Fig 1, 21pp; English.

The tomato-derived transcriptional initiation region which regulates the expression of the sequence corresp. to the p2130 clone is considered ovary-specific. Sequences hybridisable to the p2130 clone, e.g. probe p27, show abundant mRNA, esp. at the early stages of anthesis. The message is expressed in ovary integument and ovary outer pericarp tissue and is not expressed, or at least not readily detectable, in other tissues or at any other stage of fruit
                                                                                                                                                        Example 2: Pages 151-152; 238pp; Japanese.

The present sequence is the humanised light chain variable region of the murine anti-human interlaukin 5 receptor alpha chain (hiL-5R alpha) monoclonal antibody (MAb) KM1259. KM1259 is produced by the hybridoma FERM BP-5134, which was prepared by immunising Balb/C mice with hiL-5R alpha, fusing spleen cells obtained from the mice with mouse myeloma B3-dI cells and screening the resultant hybridomas. The MAb can be used to detect or assay for hiL-5R alpha and cells expressing it on their surface, especially to diagnose allergic respiratory diseases, e.g. chronic bronchitis. It can also be used to treat such diseases.
                                                                            Antibody against alpha-chain of human interleukin 5 receptor - useful for diagnosis and treatment of respiratory allergic diseases, e.g. chronic bronchitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence represents the polypetide of cDNA clone pz130. This sequence is expressed during the early stages of anthesis in tomatos. The message is expressed in ovary integumen and ovary outer pericarp tissue. It is not readily detectable in other tissues or at other stages of fruit developement. The transcription initiation region associated with this gene is therefore considered to be ovary specific. The actual function of the pz130 polypeptide is unknown. The transcription initiation region can be used for modulation of endogenous fruit products, for production of exgenous products and for modification of the phenotype of fruit and fruit products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

This is the amino acid sequence of the mouse laminin, laminin-derived principle. This is the amino acid sequence of the mouse laminin, laminin-derived principle. This is the amino acid sequence of the mainin derived protein fragments and/or laminin-derived polypeptides as potent inhibitors of amyloid formation, deposition, accumulation and/or persistence in Alzheimer's disease and other amyloidoses. The laminin products (see W5088-98) may include mouse or human laminin products (see W5088-98) may include mouse or human laminin a or Lohain, laminin Bl or B2 chain, laminin A2 chain (merosin), laminin bl or B2 chain, laminin A chain and the beta-amyloid binding domain of the laminin A2 chain (merosin), laminin protein. A method for disease comprises administering a polypeptide having a conformational similarity to a fragment of a laminin protein. A method for diamonin in a sample. Production of laminin or its fourth globular repeat in vivo provides a method for laminin or its fourth globular repeat in vivo provides a method for laminin or its fourth globular repeat in vivo provides a method for laminin or its fourth globular repeat in vivo provides a method for laminin or its fourth globular repeat in vivo provides a method for laminin or its fourth globular repeat in vivo provides a method for laminin or its fourth globular repeat in vivo provides and treatment of amyloidosis, protein, virial manition or sansociated with chronic inflammation, various forms of malignancy and Familial Mediterranean Fever (AA amyloid), the amyloidosis associated with type II diabetes associated with multiple myloid), the amyloidosis associated with home of the manitial Amyloidosis associated with seriod and Familial Amyloidosis associated with endocrine tumours such as medullary carcinome of procalcitonin).

Second the provide of procalcitonin).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Use of laminin and fragments - for developing products for use in the diagnosis and treatment of amyloid disease, e.g. Alzheimer's

pir60 1:pir1 2:pir2 3:pir3 4:pir4 Database:

scale 1.195 Mean 17.857; Variance 14.939; Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

##residues 1-32 ##label OZO2
NT This enzyme is involved in the metabolism of many drugs,
pesticides, and other foreign compounds, including xenobiotics,
by catalyzing the NADPH-dependent oxidation of various
substrates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            fold\

Purity No. 7 Mills 15. The control of Anaplasma species in rickettsemia - uses specific ELISA detection of Anaplasma species in rickettsemia - uses specific monoclonal antibodies against Anaplasma major surface protein 5 Disclosure; Columns 5-8; 7pp; English.

The present sequence represents the Anaplasma marginale major surface protein 5 (MSP-5). The invention provides a method for detecting anaplasmosis, a vector-borne rickettsial disease of cattle, sheep and goats. The method involves using the monoclonal antibody (mab) ANAF16C1 and the Anaplasma MSP-5 protein in a competitive inhibition-ELISA format for the serological detection of cattle, sheep or goats infected with A marginale. The test is specific for Anaplasma species as the MSP-5 protein detected is found in all Anaplasma species and the mab ANAF16C1 used to detect it is specifically raised against it. The detection method is claimed to be capable of accurately detecting the protein due to its specificity. Previous methods e.g. nucleic acid hybridisation, cannot always detect carriers because of cyclic changes in rickettsemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New protein SAPAPI - used for, e.g. diagnosis and prevention of various neuronal diseases claim 1; page 4-7; 12pp; Japanese.

Claim 1; page 4-7; 12pp; Japanese.

The present sequence represents the SAPAPI protein having a 992 amino acid (aa) sequence. Also described in the present invention are: (1) an animal protein having an as sequence substantially homologous to SAPAPI; (2) cDNA sequence encoding SAPAPI; or an as sequence substantially homologous to SAPAPI, and (3) a genomic DNA sequence hybridised to the CDNA or its partial sequence. SAPAPI is a novel animal protein specific for PSD-95/SAP90 and its related protein, and may be useful for the diagnosis, prevention and treatment of various neuronal diseases caused by functional or structural interference of nervous system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

distipled useful in assays lot active antigen, and in assays lot active antigen, and in assays lot active antigen, and in assays lot prostatic cancer treatment bisclosure; Fig 1, 192pp; English.

The present sequence represents Semenogelin I, a major sperm entrapping gel protein. Oligopeptides designed based on the sequences surrounding prostate specific antigen (PSA) cleavage sites (indicated above, and numbered in order of the relative affinity of a site towards PSA hydrolysis) are claimed. PSA, which has chymotrypsin-like specificity is responsible for dissolution of the gel structure formed at ejaculation by proteolysis of the major gel proteins (Semenogelin I and II, and fibronectin). Liquefaction of the ejaculate releases progressively motile spermatozoa. PSA complexed to alpha l-antichymotrypsin is the predominant form of serum PSA. Serum measurements of PSA are useful for monitorinom of the prostate. Prostate metastases are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             also known to secrete immunologically reactive PSA since serum PSA is detectable at high levels in prostatectomised patients showing widespread metastatic prostate cancer. Cytotoxic compounds that could be activated by the proteolytic activity of PSA should also be prostate cell specific as well as specific for PSA secreting prostate metastases. Conjugates of prostate cancer. The oligopeptides are useful in treatment of prostate cancer. The oligopeptides can also be used in a quantitative assay for enzymatically active PSA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New peptide substrates cleaved by prostate-specific antigen - also cytotoxic conjugates for traating prostate cancer, and assay for determination of PSA activity.

Tytotoxic conjugates for treating prostate cancer, and assay for determination of PSA activity.

Example 1: Pages 50-51: 142pp; English.

The present sequence is human semenogelin I (hSI), one of the major proteins, including hSII and fibronectlin, in the sperim entrapping gel formed at ejaculation. This gel structure undergoes dissolution proteins of prostate specific antigen (PSA), a protease with chymotrypsin like specificity, which proteolyses the above major proteins. New peptide substrates cleaved by PSA, i.e. peptides contg. a hSI PSA cleavage site, can be used in assays to determine the proteolytic activity of free PSA in a sample, and to identify cpds. which inhibit the proteolytic activity of free PSA in a sample, and to identify cpds. which inhibit the proteolytic activity of PSA, they may also be conjugated, via a covalent bond or peptide linker, to a cytotoxic agent and used to treat prostate cancer. In a PSA hydrolysis assay, the percentage of hSI cleaved by YORK PSA after
                                                                                                                  Human: semenogelin I; sperm entrapping gel; ejaculation; protease; gel structure; dissolution; prostate specific antigen; proteolysis; chymotrypsin like specificity; peptide substrate; cleavage site; assay; determination; proteolytic activity; identification; inhibitor; cytotoxic agent; conjugated; treatment; prostate cancer.

This sequence represents a Herpes simplex virus type-2 (HSV-2) protein sequence of the invention. This sequence was isolated from a HSV-2 strain sequence of the invention. This sequence was isolated from a HSV-2 strain SB5 (deposited as ATCC VR-2546) DNA fragment designated Contig ID 15. Dased on homology, this sequence is a probable DNA packaging protein. The proteins can be used for the treatment or prevention of disease, to induce an immunological response in a mammal or to identify inhibitors, activators or novel antivirals. Antagonists of the proteins can be used to onhibit a viral polypeptide. The DNA sequence or a vector containing it can also be used to induce an immunological response in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents a Harbes simplex virus type-2 (HSV-2) protein sequence of the invention. This sequence was isolated from a HSV-2 strain SB5 (deposited as ATCC VR-2546) DNA fragment designated Contig ID 103. Based on homology, this sequence is a 38K protein - human herpesvirus 1. The proteins can be used for the treatment or prevention of disease, to induce an immunological response in a mammal or to identify inhibitors, activators or novel antivirals. Antagonists of the proteins can be used to inhibit a viral polypeptide. The DNA sequence or a vector containing it can also be used to induce an immunological response in a mammal.

**Treening assays for antiviral agents - based on inhibition of herpes simplex UL15 and vP5 interaction or function

**Streening assays for antiviral agents - based on inhibition of herpes simplex viruse;

**Rethods have been developed for: (1) identifying an antiviral agent useful in treating infection with herpes viruse, comprising: (a) providing UL15 of herpes simplex virus-1 (HSV-1) or a functional cor homologue to come into association with a test compound; (c) providing VP5 of HSV-1 or a functional derivative or homologue thereof; (d) screening for inhibition of the interaction between UL15 or its convention for inhibition of the interaction between UL15 or its convention of the interaction between UL15 or its convention to homologue and VP5 or its derivative or homologue, where such inhibition is indicative that the test compound is an antiviral agent; (2) identifying an antiviral agent useful in treating infection with herpes viruses, comprising: (a) providing VP5 of herpes simplex virus-1 (HSV-1) or a functional conventive or homologue thereof; (b) permitting VP5 or its derivative
                                                                                                                                                                                                                                                                                                                            This sequence represents a Herress simplex virus type-2 (HSV-2) protein sequence of the invention. This sequence was isolated from a HSV-2 strain SEG (deposited as ATCC VR-2546) DNA fragment designated Contig ID 16. Based on homology, this sequence is a probable DNA packaging protein. The proteins can be used for the treatment or prevention of disease, to induce an immunological response in a mammal or to identify inhibitors, activators or novel antivirals. Antagonists of the proteins can be used to induce an immunological response in a mammal. Sequence or a vector containing it can also be used to induce an immunological response in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         claim 10; Fig 2bis; 29pp; English.

Claim 10; Fig 2bis; 29pp; English.

The sequence was deduced from a cDNA clone isolated from a library preparation of the anterior plutiery gland of rilapia. It encodes a modified prolactin (TPRLI) which is thought to play an important role in osmoregulation (Hydromineral balance) in this species. The gene can be expressed using the strong promoter of gene 10 of bacteriophage T?. The gene was modified to remove the signal peptide coding region and the vector expressed in E.coli HB101. The protein differs from R06893 at only two positions: Leu and Ser replace Phe and Thr at AAs 7 and 100 resp.

The product can be admin. to culturing conditions. Dosage is 5 improve their adaptation to culturing conditions. Dosage is 5 in grid food/day. R06914 and R08122.

or homologue to come into association with a test compound; (c) providing UL15 of HSV-1 or a functional derivative or homologue thereof; (d) screening for inhibition of the interaction between the VP5 or its derivative or homologue and UL15 or its derivative or homologue, where such inhibition is indicative that the test compound is an antiviral agent. The present sequence represents the HSV-1 UL15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; Page 8-11; 11pp; Japanese.
The human zona pellucida-2 (HZP-2) protein may be used as a vaccine antigen. It can be artificially synthesised using recombinant techniques. Partial sequences of the HZP-2 gene were subcloned, the sequences and primers used in cloning and subcloning are given in 092255-69.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence was deduced from a cDNA clone isolated from a library prepd. from mRNA extracted from the anterior pituitary gland of tilapia. It encodes a prolactin (PRLI) which is thought to play an important role in osmoregulation (hydromineral balance) in this species. The gene can be expressed using the strong promoter of gene 10 of bacteriophage T7. The gene was modified to remove the signal peptide coding region and the vector expressed in E.coli HB101. The product can be admin. to fish cultures to enhance growth and improve their adaptation to culturing conditions. Dosage is 5 ng-1 ug protein/g fish/day by injection or 1 ug-1 mg protein/g fish food/day.
Tilapia prolactin I.

RNA mol. derived from alphavirus RNA genome - chimeric alphavirus antigen and vaccine for immunisation against viral infections Disclosure; Fig 5; 94pp; English.

The sequence given is the non-structural polyprotein encoded by a full length Semilki forest virus (SFV) cDNA clone within an SP6 expression vector. The SP6 RNA polymerase promoter allows in vitro transcription

inhibitors of amyloid formation, deposition, accumulation and/or persistence in Alzheimer's disease and other amyloidoses. The camainin products (see W50888-98) may include mouse or human laminin A or Al Chain, laminin Blot B2 chain, laminin A2 chain (merosin). C laminin G1 chain, the globular repeats of the laminin A1 chain and the brea-amyloid binding domain of the laminin A chain. A claimed method for treating an amyloid disease comprises administering a polypeptide having a conformational similarity to a fragment of a polypeptide having a conformational similarity to a fragment of a minolyves determining levels of laminin in a sample. Production of laminin or its fourth globular repeat in vivo provides a method for involves determining levels of laminin in the products. The products and methods can be used for the diagnosis, prognosis, monitoring cand treatment of amyloidoses such as Alzheimer's disease. Down's syndrome and hereditary cerebral hemocranage with amyloidosis of the butch type (where the specific amyloid is the beta-amyloid protein), the amyloidosis associated with chronic inflammation.

Syndrome forms of malignancy and familial Mediterranean Fever (AA amyloid or inflammation-association and other B-cromailities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nakamura K, Takatsu K;
WPI: 97-202249/18.
Antibody against alpha-chain of human interleukin 5 receptor -
useful for diagnosis and treatment of respiratory allergic diseases,
e.g. chronic bronchitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    from the light chain variable region of the murine anti-human interleukin 5 receptor alpha chain (hIL-5R alpha) monoclonal antibody (MAD) KM1259. KM1259 is produced by the hybridoma lantibody (MAD) KM1259. KM1259 is produced by the hybridoma FERM BP-5134, which was prepared by immunising Babb/c mice with hIL-5R alpha, fusing spleen cells obtained from the mice with mouse myeloma P3-U1 cells and screening the resultant hybridomas. The MAD can be used to detect or assay for HL-5R alpha and cells expressing it on their surface, especially to diagnose allergic respiratory diseases, e.g. chronic bronchitis. It can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (AL amyloid), the amyloidosis associated with type II diabetes (amylin or islet amyloid), the amyloidosis associated with prion diseases including Creutzfeldid-Jacob disease, Gertstmann-Straussler syndrome, kuru and animal scrapie (PrP amyloid), the amyloidosis associated with long-term haemodialysis and carpal tunnel syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   assay; diagnosis; allergic respiratory disease; chronic bronchitis

protein - protein database search, using Smith-Waterman algorithm MPsrch\_pp

Thu Oct 28 11:24:52 1999; MasPar time 2.96 Seconds 94.825 Million cell updates/sec Run on:

Tabular output not generated.

>US-09-081-707-10 (1-7) from US09081707.pep 45 Description: Perfect Score:

1 EHSSKLQ 7 Sequence:

Scoring table:

122810 seqs, 40068593 residues PAM 150 Gap 15 Searched:

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

Mean 18.827; Variance 17.198; scale 1.095 pir60 1:pir1 2:pir2 3:pir3 4:pir4 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DAP-1, a novel protein that interacts with the guanylate
kinase-like domains of hDLG and PSD-95.
T00013
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
